Info-Hams Digest Mon, 18 Oct 93 Volume 93 : Issue 1237

Today's Topics:

ATV on 439.25
BESTIALITY AMATEUR RADIO FRATERNITY (BARF)
Charging an FNB-26 with NCD-29?
Daily Solar Geophysical Data Broadcast for 16 October
GAY & QST
Imminent Death of Ham Radio: 2m HT in Penney's Christmas Cat
New UHF "Personal Use" Band?
Summary: Plug-in unit identified
Transmission Line Losses
VOX or relay operated PTT

```

The PC equipment adds the subcarrier to the video and modulates the

final with the combined signal, which can cause the buzz.

To keep them separate would essentially require two transmitters and a duplexer.

But is there a Lambda-B.A.R.F. chapter for people who only have an attraction to members of the Beast community who are the same gender as the human?

>idea.

I got one from W&W associates. It works fine. It should NOT be used for
batteries that do not have an internal thermal limit switch. That said, I note
that I use it for all my HT batteries.

When I ordered my charger I asked for old and new style ICOM cups. I
received the charger in a box marked that it had the new style battery
cup and the extra old style cup. When I opened the box, it had an old
style cup in it. I called W&W and they sent me the right cup and told
me to keep the extra one.

I also had a battery of theirs go bad. When fully charged it would stop
working if you pressed a "magic" spot. As it discharged, it would stop if you
put any pressure on it. I sent it back and they sent me a new one.

>Who knows, maybe I'll just give up and pay the \$100.

It was about \$80 if I remember correctly.

The only complaint I have is that it uses an external transformer. So I must
unplug it after each use and plug it in again when I need it. I would prefer
an internal charger and a real on/off switch.

I'm not sure, but LAMBDA got on Wanye Green's s**t list not because
they are adovcating certain sexual behaviour.

They got there because the ARRL refused (for what reason is now
unclear, but it I heard that the ad request was received after that
issue's deadline), LAMBDA sued, and when the ARRL "relented", LAMDA
refused to drop their suit claiming that the ARRL damaged them.

Seems like a publicity grab or a way to get cash from the ARRL to me.

IMHO, the problem is that LAMBDA changed from an organization that
advocates sexual minorities to an organization that advocates
frivolous law suits.

My two cents for what it's worth. If I want to join a QSO, I drop my call during a break in the conversation -- even if it's just to correct misinformation or to provide assistance. I also drop my call for other non-emergency situations -- I need to use the autopatch, make a quick call, or whatever. I reserve break, break break, and break-break-break for real emergencies depending on the severity.

However, and I think this is the important part. When I'm in a QSO and someone wants in (dropping a callsign, break or however), that person is allowed to go ahead immediately. Part of the reason I do this is simple courtesy. The other part is that we don't know what type of traffic that person may have -- although you can generally tell by the tone of the voice. A nice side effect is that the person jumping in knows who to pass it to when finished if he or she is joining the QSO.

There are one or two people in this area (unfortunately) that hear and recognize a breaking station, go into a three-minute diatribe on the benefits of windfall in the Amazon swamps, then turn it over to the breaker. Arrggh!

I try to follow the guideline that we're all courteous and friendly toward one another -- at least as best as possible.

GMRS is another section of Part 95 which also includes Radio Control
and Citizens Band. Sometimes called Class A CB, where 27 MHz is called
Class D, both for the respective subparts of the regulations. I believe
it predates the 27 MHz service.

>uniquely defined by those same components.
>Gary Coffman KE4ZV

Gary, my point is that "matched line loss" is almost always an assumption,
not a measurement. I use 9913 coax on my uhf antenna and got S9 reports
from 40 miles away when I installed it and it had a 1.8/1 SWR. A few
weeks later my reports dropped to S7. My SWR was still 1.8/1. My coax
was still 9913 but now it contained a little water. Mother Nature quite
often makes a mockery of our assumptions.

If someone switched my 50 ohm antenna with a 50 ohm dummy load, I would
not be able to tell it by an SWR reading. I maintain that the only way

to know how much RF energy is being radiated is to measure the RF energy.

>

I operate HF mobile, and the rig I have has VOX. However, the ambient noise level makes VOX not as good an operating aid as one might suspect.

I also use a one ear-covered headset, with a mike on a small boom off the left earpiece. I have a separate push-to-talk switch, momentary on, that I hold in my hands to key the rig.

I know you said you can not use your fingers, but it seems as if you can use your hands/arms, and that means you could manage, perhaps, a switch spring loaded and controlled by your arm, pressing against your body...this does not require fingers, and yet coupled with a headset would work very well...

If you would prefer, we can take this off-line for the gory details, but I suspect airing this in the forum will get some very good minds working to solve a problem with you...

We can dislike the behavior of people without hating the individual person. I dislike the behavior of homosexuals, violent criminals, drug pushers, rapists, pedophiles, necrophiliacs, bestialphiles, peeping Toms, stalkers, repeater jammers, cannibals. (If I've left anyone out please email me. Sorry I didn't mention BSS'ers...)
(These aren't words I normally use so sorry if any are misspelled).

Now, you would not be able to determine any of the above by just looking at them, therefore they are not minorities as in the racial sense. To say that homosexuals are a minority is to say that child molesters are a minority. Should we have special hiring provisions for child molesters? Nope. We must not classify a person as being in a minority according to their behavior.

The plain truth is that most folks are disgusted by the behavior of the above groups. To compare disliking a person's actions with Hitler's wanting to exterminate the Jews is a very, very sorry argument; the usual empty arguments that the pro-gay groups try to pin on us.

Whether you're a homosexual or a cannibal keep your activities to yourself so we won't be disgusted and you won't be judged. If you flaunt your unpopular behavior then expect to be chastised.

Okay, lets all go over to .policy and continue the code debate and discuss antenna restrictions.

You are nauseated by a class of PEOPLE, by HUMAN BEINGS as you are by feces or vomit??!?

Then stop obsessing about what they do in the bedroom.

Get some help! What they do is none of your business.

This comparison of a minority group to vomit or feces reminds me of some quotes I found recently:

Adolf Hitler, quoted in "Hitler", by Joachim Fest, Vintage Books Edition, 1974, p. 679:

Nature is cruel; therefore we are also entitled to be cruel. When I send the flower of German youth into the steel hail of the next war without feeling the slightest regret over the precious German blood that is being spilled, should I not also have the right to eliminate millions of an inferior race that multiplies like vermin?

^^^^^^^^

Speech by Reichsfuehrer-SS Himmler at Kharkow, April 1943
[Nazi Conspiracy and Aggression - Washington, U.S Govt. Print. Off., 1946, Vol. IV, p. 572]

We have - I would say, as very consistent National Socialists, taken the question of blood as our starting point. We were the first really to solve the problem of blood by action, and in this connection, by problem of blood, we of course do not mean antisemitism. Antisemitism is exactly the same as delousing.

Getting rid of lice is not a question of ideology.

^^^^^^^^

It is a matter of cleanliness.

At least the Nazis only referred to the objects of their obsessions as lice or vermin, not feces or vomit.

Any other groups besides homosexuals cause you as much annoyance?
